U.S. Patent and Trademark Office PTOL-326 (Rev. 7-05)

Application/Control Number: 10/797,593 Page 2

Art Unit: 2876

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-5,14-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Do et al 6,206,284. Do discloses an ATM with a fascia (12) in which includes a plurality of automated banking machine input and output device access openings, i.e. cash dispenser opening 24, deposit envelope slot 30, display screen 12a and card reader 12b. There is disclosed an ATM housing, box portion 10. The fascia is connected to the housing by hinge plate 29, i.e. an articulating "link". The fascia is movable generally in the horizontal direction, i.e. pivots about the generally vertical hinge axis. The fascia, being pivotable, therefore tilts relative to the housing of the ATM. A "stop" to limit the motion of the fascia is inherent in the operation of the hinge, as is the member operative to engage the stop. That is, because of the orientation of the hinge plate of Do, the fascia can only be opened so far before the motion of the fascia is "stopped" as the hinge plate is fully opened.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/797,593

Art Unit: 2876

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Page 3

5. Claims 6-13,20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Do et al 6,206,284 in view of Isozaki et al 4,919,058. Do discloses that which is seen above. Regarding claims 10-11, Do does not disclose the latch or spring lock mechanism as claimed. Isozaki discloses an ATM door operating apparatus that includes a spring latch mechanism (34),(4) which includes roller (8) attached to the fascia. The positioning of the roller supports or retains the fascia when the fascia is closed, i.e. in the docked position. A handle is inherent. The examiner notes that there is currently no claimed limitation describing the specific handle, thus a handle is inherent as there must be some means of grasping the fascia of Do as combined with Isozaki in order to open/close the fascia.

Do and Isozaki do not disclose the hook member or the pull handle as in claims 1-9,12-13,20. Official Notice is taken that hook fastening means and pull handles for releasing the hooks on closable housing structures are old and well known. It would have been obvious to a person of ordinary skill in the art at the time of the invention to provide Do

Art Unit: 2876

as combined with Isozaki with a hook latch mechanism in order to positively and securely fasten the fascia in a closed position, and to provide Do as combined with Isozaki with a pull handle for releasing the hook in order to allow the fascia to be opened.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl D. Frech whose telephone number is (571) 272-2390. The examiner can normally be reached on maxi-flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on (571) 272-2398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
